

Project Title:

Student Result Calculator (GUI)

Name:

Om Saini

Course:

FYCS

Subject:

Python Programming

Software Used:

- Python 3.12.10
- IDLE
- Tkinter

Introduction:

The Student Result Calculator (GUI) is a desktop-based application designed to simplify the process of calculating and displaying students' academic results. Using a graphical user interface (GUI), this program allows users to enter student marks for different subjects and automatically calculates the total, average, and grade. It is a practical tool for teachers and students to manage academic performance efficiently without manual calculations.

Objective:

1. To develop a user-friendly application for calculating student results
2. To reduce errors associated with manual result calculation.
3. To provide instant feedback in the form of total marks, percentage, and grade.
4. To familiarize students with GUI programming in Python using Tkinter.

Program Code:

```
import tkinter as tk

from tkinter import messagebox

def calculate_result():
```

try:

name = entry_name.get()

m1 = int(entry_sub1.get())

m2 = int(entry_sub2.get())

m3 = int(entry_sub3.get())

total = m1 + m2 + m3

percentage = total / 3

Grade System

if percentage >= 75:

grade = "A"

elif percentage >= 60:

grade = "B"

elif percentage >= 40:

grade = "C"

else:

grade = "Fail"

result_text.set(

f"Name: {name}\n"

f"Total: {total}\n"

f"Percentage: {percentage:.2f}%\n"

f"Grade: {grade}"

)

except:

messagebox.showerror("Error", "Please enter valid numbers!")

```
# Main Window
```

```
root = tk.Tk()
```

```
root.title("Student Result Management System")
```

```
root.geometry("400x400")
```

```
root.configure(bg="#f0f8ff")
```

```
# Heading
```

```
tk.Label(root, text="Student Result System",
```

```
    font=("Arial", 16, "bold"),
```

```
    bg="#f0f8ff",
```

```
    fg="blue").pack(pady=10)
```

```
# Inputs
```

```
tk.Label(root, text="Student Name", bg="#f0f8ff").pack()
```

```
entry_name = tk.Entry(root)
```

```
entry_name.pack()
```

```
tk.Label(root, text="Subject 1 Marks", bg="#f0f8ff").pack()
```

```
entry_sub1 = tk.Entry(root)
```

```
entry_sub1.pack()
```

```
tk.Label(root, text="Subject 2 Marks", bg="#f0f8ff").pack()
```

```
entry_sub2 = tk.Entry(root)
```

```
entry_sub2.pack()
```

```
tk.Label(root, text="Subject 3 Marks", bg="#f0f8ff").pack()
```

```
entry_sub3 = tk.Entry(root)
```

```
entry_sub3.pack()
```

```
# Button
```

```
tk.Button(root, text="Calculate Result",  
          bg="green", fg="white",  
          command=calculate_result).pack(pady=15)
```

```
# Result Display
```

```
result_text = tk.StringVar()  
  
tk.Label(root, textvariable=result_text,  
          bg="#f0f8ff",  
          font=("Arial", 12)).pack()
```

```
root.mainloop()
```

Output:

Student Result System

Student Name _____

om saini

Subject 1 Marks

90

Subject 2 Marks

80

Subject 3 Marks

70

Name: om saini
Total: 240
Percentage: 80.00%
Grade: A
